Brief History

The Consolidated Virginia Mining Co. on the Comstock Lode at Virginia City, Nevada, was organized in 1867, but the sinking of a shaft was delayed for two years. The lode was difficult to find, work stopped, and the stock fell considerably in 1870. In 1871, James Flood began to

buy stock in Consolidated Virginia and, joined by John Mackay, James Fair, and William O'Brien, formed the Bonanza Firm. They bought the land owned by the Consolidated Virginia Mining Co. and hoped to find rich ore in that section between the Gould & Curry and the Ophir mines. In 1873, they struck the Big Bonanza, which produced over \$100 million of ore from 1873-82. The firm bought control of the adjoining Ophir and Mexican mines in 1877. Although the firm dominated the Comstock from 1876-95, when Mackay sold the interests to San Francisco stockbrokers, the last dividend was paid in 1880. The Con-Virginia was the most successful mine on the Comstock and one of the few to pay more in dividends than it levied in assessments. In the 1930's, the company was reactivated to mine and mill the lower grade ore still remaining. The reactivated firm in 1933 collected old maps and also made detailed new maps of the older workings, level by level. These 112 large rolled maps (which include one signed by Charles Frederick Hoffmann) show various mines and mining claims on the Comstock Lode in addition to Con-Virginia.

Some high-grade veins were found and production continued until 1942 when gold mining activity was curtailed because of war-time restrictions. After this time, the mine operated only sporadically and correspondence ceases in 1955.
